Programs include YRP Speech & Language, Tri-Regional Infant Hearing, and Tri-Regional Blind Low Vision.</p>

Appendix C

Screening Tools used in York Region

This guide is intended for early years professionals working with children 0-6 years. The Guide includes screening tools from conception through age six years.

What is Screening?

Screening is usually a non-invasive procedure done with groups of people or a population. Screening is the process of identifying characteristics known to be associated with a certain population, age group, etc.

For the purposes of this Guide, we have focused on an inventory of screening tools being used in York Region. When indicated as a result of this screening, qualified professionals may administer the appropriate assessment. These tools are not within the scope of this Guide.

What happens after Screening?

Screening is only a first step in identifying "red flags" and informing whether a more thorough assessment is advisable. Screening helps ensure that children and families who need a full assessment receive one, and if necessary are referred to skilled professionals who are best able to provide service and/or intervention. A list of resources associated with specific domains is accessible in "Where to go for help" in the Red Flags Guide.

It is also intended, regardless of the results of screening, that children and families are assisted in accessing appropriate community supports, resources and education.

Who does Screening?

See the "Who can administer" column of the chart below for details on who can administer the various screening tools.

Physicians are also encouraged to consult the latest edition of *Improving the Odds: Healthy Child Development* at www.ocfp.ca

Things to consider before screening

Before using a screening tool, a professional must consider:

- Whether you are qualified to administer this screen.
- The role of the parents, as informants about the child, as recipients of potentially sensitive information, and as decision makers.
- What level of confidentiality will be used with the screen? How will this level of confidentiality be ensured?
- Where and when the screening should take place?
- Whether there are any cultural implications to consider when applying the screening, please see "Cultural Sensitivity When Working with Families" section the beginning of this guide.

How to discuss sensitive issues with families related to using the screening tool and reporting the results. For example, it is necessary to use care and sensitivity with a family when there is a potential difficulty in a child's development. Please "How to talk with parents about sensitive" section the beginning of this guide.
